

R-5715 and R-5610G Megtron® PPO/Epoxy Resin System

Megtron® is a high speed, high performance PPO/Epoxy resin system. Megtron® has a low dielectric constant (Dk) and a low dissipation factor (Df) that provides designers with significant benefits in system performance for telecommunication applications, routers/switching equipment, high-speed transfer and computing applications. All Matsushita materials are manufactured to the highest standards of quality and consistency available in the market. Surface classification per IPC 4101A is Class "C" (5 point max) and thickness is Class "C". Both the R-5715 laminate and the R-5610G Prepreg and utilize CAF resistant glass.

R-5715 Laminate Properties				
Thickness (inches)	Thickness (mm)	Thickness Tolerance (inches)	Laminate Construction	Dielectric Constant @ 1MHz
.0022	.05	.0005	1-106	3.8
.0027	.06	.0005	1-1080	3.8
.0040	.10	.0005	1-3313	3.9
.0050	.13	.0007	106/3313	3.8
.0060	.15	.0007	1080/3313	3.9
.0070	.18	.0009	2-3313	3.9
.0080	.20	.0009	3313/2116	3.9
.0100	.25	.0009	2-2116	3.9
.0120	0.30	.0009	2-1080/7628	3.9
.0140	0.36	.0015	2-7628	4.2
.0180	0.45	.0015	3313/2-7628	4.1
.0210	0.53	.0019	3-7628	4.2
.0280	0.70	.0019	4-7628	4.2
.0310	0.80	.0019	1080/4-7328	4.2
.0350	0.90	.0029	5-7628	4.2
.0470	1.20	.0029	2116/6-7628	4.2
.0590	1.60	.0029	8-7628	4.2

Laminate thicknesses published measure the laminate base material without the metal cladding. Matsushita utilizes low profile HTE copper foil on all laminates. Both standard HTE and Reverse Treat Copper Foils are available.
